REPORT OF SEED CERTIFIED IN 1944 BY STATE CROP IMPROVEMENT

ASSOCIATIONS

Compiled by

O. S. FISHER
Extension Agronomist

In reply to a questionnaire sent to the State Crop Improvement Associations as to the amount of seed certified in the respective States, reports were received from 35 States.

This report, made as of December 15, 1944, indicates the total amount of seed certified during the year. In a few instances, estimates only are given, as final figures will not be available until late in the spring of 1945.

New York is the only State having an important Crop Improvement Association program from which a report was not received. Due to unavoidable circumstances, it was impossible to get the report in sufficient time for its inclusion in this compilation.

The report, this year, is made according to varieties and strains; also, acreage of crops certified has been included. In a few instances, States did not report acreage but did report production; in others, production was reported and not acreage. However, as a whole, the report is reasonably complete.

One new feature, this year, is that a total of all hybrid corn certified is given by combinations; so, one may have a much more complete picture of the hybrid corn program than has been possible in other years.
